

enel x

Start your business journey toward a **Net-Zero** economy

Track your emissions, design a decarbonization strategy, engage your supply chain and achieve Net-Zero with Enel X.

Enel X can help businesses plan and execute **360°, custom-fit, decarbonization energy roadmaps**, to perfectly blend in with the operational priorities of a specific business.

Our modular approach consists of a broad range of **Net-Zero services**: from data gathering, **GHG emissions calculation**, tracking and reporting to **decarbonization roadmap definition, implementation** as well as renewable energy supply and on-site energy efficiency solutions.

5 steps to begin your journey towards Net-Zero

Assess the current situation

- Identify and categorize emissions drivers;
- Survey and engage key organizational stakeholders and functional business leaders;
- Emissions calculation, tracking and measurement (scope 1, 2 & 3) in line with GHG Protocol and/or ISO14064-1;
- Review current sustainability goals, emissions reduction targets, and any completed or planned actions;
- Identify and prioritize areas that produce the most to the emissions.

Design a Net-Zero roadmap

- Identify, prioritize and optimize sustainability and energy management goals;
- Set near, mid, and long-term strategy, relevant targets and actionable implementation plans;
- Establish internal cost of carbon;
- Align stakeholders and supply chain to ensure collective buy-in on established goals & planned actions.

Implement & execute decarbonization solutions, such as:

- Bundled and unbundled offsite RE purchasing (EACs, PPAs/VPPAs, Green Tariffs);
- Onsite RE solutions, energy efficiency programs and site and fleet electrification;
- Carbon reduction program implementation, renewable fuels procurement and carbon offsetting;
- Digital energy management software to optimize your consumption and capture emissions data;
- Implementation of supply and value chain engagement programs and procurement process enhancements.

Track & report results with continuous optimization

- Continuous tracking, monitoring and measurement of direct and indirect emissions (scopes 1,2 & 3);
- Assistance with disclosure through CDP, or other platforms, and charting of your emissions reduction progress.

Communication support to highlight achievements

- Development of marketing materials and thought leadership pieces to communicate progress towards decarbonization and net zero goals with your customers, employees, board of directors, shareholders and your wider business community.
